

BADIRA • Senior Project Schedule

A self-adaptive framework for predicting the risk of pregnancy complications

Dana Al Mounayer & Jwdee Alimam • Supervisor: Dr. Naila Marir • Clinical collaborator: Dr. Rania • Effat University

SDLC coverage: planning & requirements → analysis & design → implementation → integration → testing & validation. Deployment and maintenance are outside the scope of the senior project.

Critical path: data use agreement → data in hand → Data Profiler → model selection → evaluation. Section 2 is the only phase whose timing is not under the team’s control, so the Data Profiler and the selection policy are developed on public data in parallel while the applications are pending.
