

Task 3 — Judge Channel Study

Video Notes + Final Required Task

Prepared from the five assigned Arbana Marketing videos

Part A — Notes for Each Video

Video 1 — أسباب فشل المشاريع: مشروعك ما فشل، أنت فشلت في توصيله

Main idea: A strong product is not enough. If people do not understand the value quickly, the product can still fail.

Lesson	Practical meaning
Simple and clear message	Describe what it is, who it is for, and what problem it solves in a short, memorable way. Avoid unnecessary technical language.
Think about the complete product	Do not stop at the prototype. Understand what is needed to turn the MVP into a product that can realistically be launched or sold
Learn from existing products	There is no perfect product. Study what competitors do well and identify the strongest ideas that Badira can combine or improve.
Have a clear vision	Everyone on the team should understand what we are building, why we are building it, who it is for, and where it should go.
Prepare for “what if?” scenarios	Think through customer, money, technology, data, clinical, competition, and adoption problems before they happen

Application to BADIRA

Start with one simple sentence that explains BADIRA's value. Then introduce the technical details. Keep the MVP clear and separate from future features.

Video 2 — دراسة السوق: كيف تدرس مكان مشروعك وتعرف منافسيك بدقة؟

Main idea: Understand the market before assuming there is a market. Look for customers, competitors, complaints, gaps, and the size of the opportunity.

Lesson	Practical Meaning
Study the exact market	Check whether there is a real opportunity in the specific market you want to enter.
Use real customer feedback	Reviews show what customers like, dislike, and repeatedly complain about.
Study the closest competitors	Compare several competitors: offer, prices, experience, strengths, and weaknesses.
Observe behavior directly	Watch what customers actually do instead of relying on assumptions.
Design from evidence	Build around what customers value and avoid the problems they repeatedly mention.

Application to BADIRA

Show the specific Saudi maternal-health gap, not only the global preeclampsia problem. Use local clinical practice, competitors, and user evidence to prove the need.

Research Checklist

Research Area	What to Look For
Google Maps + Reviews	Study locations, branches, ratings, reviews, and recurring complaints.
Negative Reviews	Look for unmet needs. Complaints can reveal opportunities competitors are not solving.

Surrounding Market	Understand where customers are, what alternatives exist, and what services already surround them.
Soogk	Use the platform to investigate competitors, reviews, branches, and market information.
TAM	Estimate the total addressable market relevant to the product and target population.

Video 3 — استهداف العملاء: منتجك رهيب بس تباع للشخص الخطأ

Main idea: A strong product can fail if it targets the wrong customer or uses the wrong channel.

Lesson	Practical Meaning
Right customer	Identify exactly who the customer/user is
Right channel	Choose marketing channels based on customer behavior, not popularity
Test instead of guessing	If unsure, test channels and compare real responses.
Build community	Build a strong network around the product

Application to BADIRA

Decide whether the primary user/customer is the pregnant woman, obstetrician/doctor, hospital/clinic, or a healthcare organization such as the Ministry of Health. Do not present all groups as the same customer.

Video 4 — الذكاء الاصطناعي في التسويق: فخ «النسخ واللصق»

Main idea: AI is useful, but it should not be treated as automatically correct; it needs human judgment and local context.

Lesson	Practical Meaning
AI lacks full local context	Generic AI may miss local culture, language, goals, and customer context.
AI is a tool, not the final authority	Use AI for support, but humans must judge whether the output is appropriate.
Avoid copy-paste AI	Using the same AI output as everyone else removes differentiation.
Evaluate output quality	Review AI output instead of accepting it automatically.
Teach AI your context	Better knowledge of the customer and context leads to better AI guidance.

Application to BADIRA

Show that BADIRA's AI is clinically grounded, checks data quality and population relevance, communicates uncertainty, and supports—not replaces—clinical judgment.

Video 5 — هل رغبتك بالبيع توازي رغبة العميل بالشراء؟

Main idea: A business must understand when, where, why, and at what value the customer actually wants the product.

Lesson	Practical Meaning
Right timing	Sell when customer need is highest, not only when the business wants to sell.
Right place	Be present where the customer actually searches for the solution.
Clear objective	Know whether the goal is awareness, education, comparison, or conversion.
Marketing before selling	Build understanding and trust before asking for a purchase.
Price and perceived value	Price changes the target audience and the level of proof they expect.
The four closing questions	Where, when, and why is the customer looking—and what are they willing to pay?

Application to BADIRA

Emphasize BADIRA's timing: before diagnosis and while there is still time for assessment, monitoring, and clinician-directed prevention.

Part B — Final Task 3 Deliverable

One-page judge-channel study

1. Three things he says a pitch must do

Rule	Video	His words	What it means
Make the project instantly clear	Video 1	إذا ما قدرت تشرح مشروعك بكلمة واحدة أو جملة واحدة، لازم تراجع نفسك شوي.	The judge should understand BADIRA's core value before technical detail.
Know the exact customer and real market	Videos 2–3	المشكلة مو بأنك ما تعرف تسوق، المشكلة إنك تسوق للعميل الغلط.	BADIRA must prove who needs it, what alternatives exist, and where the Saudi gap is.
Use AI with judgment and local context	Video 4	لا تعتمد عليه بأنه يعطيك الإجابة الصح، خله أداة.	AI should be guided by evidence, validation, local context, and human judgment.

2. Where BADIRA's current story fails his test

- Technical terms can appear before the simple value is clear.
- The customer story is less precise than the technical story.
- The Saudi gap still needs direct local evidence.
- The pitch must prove that the AI is real, relevant, validated, and safe.
- The moment of value should be clearer: before diagnosis and while action is still possible.

3. Two concrete changes to the pitch

Change 1 — Open with one clear sentence. “BADIRA helps identify preeclampsia risk early, using the information available for each woman, while there is still time to act.” Then explain the technical framework.

Change 2 — Add a “Why BADIRA, and why AI?” slide. Show Checklist = fixed categories; BADIRA = combined profile + available measurements + reliability + timing. End with the safety boundary: BADIRA supports clinical assessment and does not replace the clinician.
